

Liftboy *vertical lifting platform*

Where ramps are too steep or too long – where stairlifts or elevators are needless due to too small a difference in altitude – the LIFTboy is the optimal solution.

With the help of our LIFTboy, wheelchair users and physically disabled persons can get over differences in altitude of up to 83cm.

The LIFTboy is designed for indoor and outdoor use! As the weather-proof lifting platform with a total weight of only 52.5 kg can easily be put up, it offers a perfect solution also for urgent cases.

The lifting platform is operated by means of a handset that is equipped with a spiral cable and can be fixed to the banisters.

A 24-V-motor, which is connected via a transformer with a socket, lifts the LIFTboy up and down.

A manual ramp (or optionally an electrically adjustable ramp) guarantees easy access to the lifting platform. The electric ramp automatically lifts either up and down when the control switch is pressed. As, in a folded up position, the ramp also works as a safety barrier, the lifting of the platform is impossible when the ramp is lowered.

freedom to enjoy life

A bellow covers the LIFTboy on all four sides and provides protection from contusions. An additional fixed banister serves as protection of the upper landing. The long sides are equipped with a safety edge and a 40 cm high banister.

By means of adjustable limit switches, the LIFTboy can easily be set to the requested lifting height.

The lifting platform and the access ramp are covered with a skid-proof coating.

Standard Specification

Type	1	2
Max. lifting height	595mm	830mm
Loading capacity	180kg	180kg
Lifting speed	10mm/s	10mm/s
Min. height	100mm	120mm
Weight	52,5kg	71,5kg
Power supply	24V via transformer	
	230-V-power supply	
Internal dimensions (length)	1170mm	1495mm
Internal dimensions (width)	710mm	785mm
External dimensions (length)	1180mm	1505mm
External dimensions (width)	810mm	890mm

In some situations it is necessary to do a special adaptation on the lifting table. The above mentioned specification could then be a little bit different.
